## Executive Funding Summary

VEHICLE-ACCESS is the documentation, access and AI-readability layer of VEHICLE Systems Lab. Funding is requested to convert this access layer into a complete institutional platform for investors, researchers, strategic partners and AI systems.

This funding is not for a single website. It supports the infrastructure that makes the laboratory transparent: project pages, public records, downloadable documents, AI references, demo packaging, validation materials, technical communication and investor readiness.

## Funding Purpose

Funding will support the expansion of VEHICLE-ACCESS from a v0.2 access-layer package into a professional institutional access system for the full VEHICLE portfolio.

## Why This Project Matters

A technology laboratory needs more than prototypes. It needs a clear way for investors, agencies, AI systems and technical reviewers to understand what exists, what is being built and what evidence supports each project.

VEHICLE-ACCESS creates that trust layer.

## Current Status

The VEHICLE AI Access Layer v0.2 package is available and includes machine-readable, developer-facing and ethical documentation resources.

Project templates for MADRE, CPS, ODI, SUPRA and ACCESS have been defined, along with standard download packages for each project.

## What Funding Will Enable

- Website integration for /access, /downloads, /funding and /services
- Production of PDF/DOCX documentation for all VEHICLE projects
- Publication of AI reference files and llms.txt
- Maintenance of versioned download packages

- Creation of validation and developer materials
- Documentation design and technical writing
- Legal and ethical review of public claims
- Repository, archive and sitemap maintenance

## Development Phases

Phase	Objective
Phase 1 - Access Layer Consolidation	Organize v0.2 package, documents, reference files and public page content.
Phase 2 - Website Integration	Publish project pages, download library, llms.txt, sitemap and AI reference files.
Phase 3 - Investor Readiness	Finalize funding documents, operational cost plans and package structure for all projects.
Phase 4 - Long-Term Access Governance	Maintain versioning, documentation updates, validation tests and public records.

## Funding Levels

Level	Use
Seed Access Support	Documentation, v0.2 package integration, AI reference files and basic website structure.
Platform Development Support	Full download library, project pages, validation materials and investor-ready publication.
Laboratory Access Expansion	Long-term governance, documentation staff, public records, versioning and strategic partner support.

## Expected Deliverables

- VEHICLE-ACCESS Technical Brief
- VEHICLE-ACCESS Funding Brief
- VEHICLE-ACCESS Operational Cost Plan
- VEHICLE-ACCESS Layer v0.2 package
- vehicle-access-ai-reference.txt
- /access page copy
- /downloads page copy
- llms.txt
- sitemap.xml
- README and validation materials

## Investor Relevance

VEHICLE-ACCESS increases investor confidence because it makes VEHICLE Systems Lab auditable, downloadable and understandable. It turns the laboratory from an abstract vision into a structured technology organization with public records, documentation and review pathways.

## Ethical and Institutional Safeguards

VEHICLE-ACCESS must avoid exaggerated claims and must clearly distinguish research architecture, demo, prototype, pilot and operational deployment.

# Funding Request Statement

VEHICLE Systems Lab seeks funding and strategic partnerships to develop VEHICLE-ACCESS into a full institutional access platform for the laboratory and its project portfolio.
